DEEPAK JHA

AI-native Product Builder · Associate Architect, Apra Labs · 10 Years in Industry

+91 9572 36 2138
hello@dpkay.com
dpkay.com · github.com/dpkay-io · linkedin.com/in/dpkjha

Product engineer and architect, building end to end since **2013**, sharpened by **startup culture and fast-paced delivery**: I ship quickly and own outcomes. At work I designed and built an **agent-driven delivery pipeline from spec to deployment** and I architect and lead a real-time platform running **8,000+ concurrent cameras**. Outside work I publish **10 open-source tools for AI coding agents** and ship Android and desktop products, including **TogglDev (4.5★, 10K+ downloads)**.

EXPERIENCE

Apra Labs — Associate Architect (2024–Present) · Senior SWE (2022–2024) · SWE (2019–2022) · **AlienHu** — Software Engineer (2017–2019)

SKILLS

AI-NATIVE

Spec-to-deploy pipelines
MCP servers & plugins
AI test & PR automation
Agent verification

LANGUAGES

C#
TypeScript / JavaScript
Kotlin
Rust
Go
Python
Java
C / C++
Dart
PHP

FRONTEND & MOBILE

React / Redux
Angular
HTML5 Canvas
Electron
Android
Flutter
React Native
Ionic

BACKEND & DATA

Node.js / Express
.NET
SignalR
GraphQL
MySQL
MongoDB
Redis
CouchDB / PouchDB
Neo4j

CLOUD & REALTIME

Azure
AWS
GCP
Docker
CI / CD
Microservices
WebRTC
WebSockets
MQTT / IoT
Nginx

ALSO

Machine Learning
NLTK

EDUCATION

B.E. in Computer Science & Engineering
VTU (2017), Karnataka

AI-NATIVE ENGINEERING

Agent-Driven Software Delivery Pipeline

APRA LABS

Designed and built a pipeline that automates software delivery **from spec to deployment**: AI-assisted **code writing**, **test-case generation**, **e2e automation code generation**, an **e2e test stack spanning 10 moving infrastructures**, with development and test status synced in real time to **Azure DevOps (VSO)**, automated **PR reviews**, and **reporting**.

Tooling for AI Coding Agents

INDEPENDENT · 11 NPM PACKAGES (10 MIT)

Published tools for Claude Code and MCP-compatible agents: **claude-shift** (3K+ downloads) schedules Claude Max usage windows around your work hours; **claude-ticker** (2.5K+) shows context, limits and cost in one status line; **GhostPM** (1.5K+) keeps a local task ledger synced to GitHub Issues or Azure DevOps; **claude-wingman** hands work to agents on other machines; **AntiBluff** and **AntiClimax** keep agents honest and self-reviewing; **toggldev-remote** lets agents drive real Android devices over MCP.

SYSTEMS & ARCHITECTURE

Video Surveillance System

2020 – Present

APRA LABS · LEAD & ARCHITECT

Architect and lead a cloud platform for **low-latency live streams**, configuration and event capture across thousands of **geo-distributed cameras**, multiple tenants and regions. Built a middleware layer with **localized brokers and edge protocols**, cross-region routing over a **distributed service bus**, and **real-time signaling and streaming state** for tenant isolation and seamless failover. Mentor a cross-functional team from requirements to production rollout.

Impact: **Zero-downtime regional failovers**, sub-second stream switching, **8,000+ concurrent cameras**, new enterprise tenants onboarded without extra infrastructure

Stack: C# (.NET), Azure Service Bus, SignalR, Azure Functions, Redis, WebRTC, MQTT, ONVIF, Milestone VMS, React, Redux

Real-Time Multipurpose Dashboard

2023 – Present

APRA LABS · LEAD & ARCHITECT

Designed and built from scratch a modular dashboard rendering hundreds of **live-updating widgets** and **millions of concurrent data points** without blocking the UI thread: a **custom HTML5 Canvas pipeline**, heavy work offloaded to **Web Workers**, **progressive data fetching** and lazy evaluation of off-screen state. Mentor a junior developer on the project.

Impact: A **locked 60 FPS** with **zero browser memory leaks**, powering 24/7 multi-building security and access-control operations

Stack: C#, SignalR, SQL, React, Redux, HTML5 Canvas, Web Workers, TypeScript

E-Commerce Middleware & POS Platform

2017 – 2019

ALIENHU · SOFTWARE ENGINEER

Built a full-stack **B2B point-of-sale app** with a team, and **single-handedly** the **B2C e-commerce mobile app** plus the shared sync middleware across **fragmented POS networks**, with a fault-tolerant **offline transaction queue** that gave **zero data loss** on resync. Stack: Node.js, CouchDB / PouchDB, Angular, Electron, React Native, Ionic.

SHIPPED PRODUCTS & OPEN SOURCE

TogglDev (Android, Kotlin): toggles Developer Options via widget, Quick Settings tile and remote access; **4.5★, 10K+ downloads**. **AutoDeck**, **CloseLink** and **AfterCall Shield** are also on Google Play. **Terminal Studio**: GPU-accelerated terminal multiplexer in Rust (wgpu, egui).

12 open-source projects (MIT / Apache-2.0) at github.com/dpkay-io, including Terminal Studio (Rust), GitReg (Rust), AntiBluff and AntiClimax.
